

COINDAGO
CDAGO

A gaming company on BNB Chain.
Real games. A fixed-supply token.
Game revenue used for liquidity and burns.

Network
BNB Chain - BEP-20

Total Supply
420,690,000,000,000 CDAGO

First Game
Dago Blocks

Contract: 0x9cec82746f33c954e250ac2d17d8ebbd67731d01
Official X: https://x.com/coindago | Contact: Coindagocontact@gmail.com

CoinDago is not a memecoin. This document describes a real, early-stage gaming project. It is not financial advice and it makes no promise of returns.

EXECUTIVE SUMMARY

A live token, a verified contract, and a game that already exists

CoinDago is a gaming company founded in Ciudad Obregon, Sonora, Mexico, building a growing catalogue of mobile games linked to a single token: CDAGO on BNB Chain.

The project is already executed, not only planned. The CDAGO token was deployed on BNB Chain mainnet on 8 November 2026. Its contract was verified on BscScan on 9 November 2026. A PancakeSwap V2 liquidity pool (CDAGO / BNB) was created on 8 November 2026 with 50% of the total supply. The first game, Dago Blocks, is built and playable.

420.69 trillion

NO MINT AFTER DEPLOYMENT

50% / 50%
GAME INCOME: LIQUIDITY / BURNS

What makes CoinDago different

- **A company first, a token second.** Revenue is intended to come from games - advertising and future game sales - not from selling tokens to players.
- **A clear use for revenue.** Game income is split 50% to adding liquidity and 50% to buying and burning CDAGO, reducing supply over time.
- **A named, public founder.** The founder is identified in this document with a public LinkedIn profile, rather than operating anonymously.
- **No false promises.** Points earned inside Dago Blocks are game points. They are not crypto payouts, and playing the game does not earn free cryptocurrency.

VISION

Many games, rising quality, one ecosystem

The founder has been in the crypto world for almost eight years and tried to build this project about two years ago with other tools. CoinDago is the result of returning to that idea with a concrete order: build the game first, generate real income from it, and use that income to strengthen the token.

The problem

Most mobile game revenue flows in one direction: players watch advertising and make purchases, and none of that value returns to the community that supports the game. At the same time, many crypto tokens launch with no product at all - no game, no users, and no revenue beyond speculation.

The CoinDago approach

- Build accessible mobile games that anyone can play, starting with an offline puzzle game that needs no account and no wallet.
- Publish those games through Google Play and grow a real player base.
- Direct game income back into the project under a published rule: 50% to liquidity, 50% to burns.
- Add new games of different types over time, raising the quality level with each release, so CDAGO is backed by an ecosystem rather than a single title.

> **Positioning:** CoinDago does not present itself as a memecoin and does not use meme marketing. Its public communication, branding, and documents are those of a serious gaming company.

Who it is for

Players who enjoy simple, offline mobile games; supporters who want to follow a transparent, founder-led project from its earliest stage; and holders who understand that CDAGO is an early, thinly traded token whose value is not guaranteed.

THE TOKEN

CDAGO: fixed supply, no minting after deployment, burnable

CDAGO is a BEP-20 token on BNB Chain, built on OpenZeppelin contracts (ERC20 + Burnable). The full supply was created at deployment and sent to the founder's wallet. The contract contains no function to mint additional tokens after deployment, so the supply can only stay the same or decrease through burns.

Token Specifications	
Token name	CoinDago
Symbol	CDAGO
Network	BNB Chain (BEP-20)
Contract address	0x9cec82746f33c954e250ac2d17d8ebbd67731d01
Total supply	420,690,000,000,000 CDAGO
Decimals	18
Standard / base	OpenZeppelin ERC20 + Burnable, Solidity v0.8.34, OpenZeppelin 5.6.1
Deployment	8 November 2026, BNB Chain mainnet. Transaction: 0x89575fbfdef03161e7c6c9fc13665b079baeda5b9637a2a10871741f86938be1 (Block 132534019)
Verification	Verified on BscScan on 9 November 2026 - matching bytecode and ABI confirmed
Minting	None after deployment
Burns to date	None yet at the date of this document

Verify everything in this table directly on BscScan: https://bscscan.com/tx/0x89575fbfdef03161e7c6c9fc13665b079baeda5b9637a2a10871741f86938be1 - the contract address above is the only official CDAGO contract. Any other address using the CoinDago name is not official.

TOKENOMICS

Half the supply in the pool on day one

CoinDago kept its initial distribution simple and public, so that any reader can check it on-chain.

Allocation	Amount and Status
Liquidity pool - 50%	210,345,000,000,000 CDAGO placed in the PancakeSwap V2 CDAGO / BNB pool on 8 November 2026, paired with 0.002 BNB. Pool fee: 0.25%.
Held by founder - 50%	210,345,000,000,000 CDAGO held in the founder's wallet, recorded internally as 30% project reserve and 20% allocated to future burns.
Team / ICO / private sale	None. There was no ICO, IEO, or private sale.

Liquidity - the honest position

The initial pool is very small and thin. That means the price moves a lot with any trade, and wallet applications may flag the token for low locked liquidity and unstable price. The founder has publicly stated he has no interest in selling his holdings, holds half the supply, and chose to leave the liquidity unlocked for now, with the intention of locking it (for example through PinkLock, for around one year) once there is more liquidity in the pool. Readers should treat the unlocked status as a real risk until that lock happens, and verify the current status on-chain.

How to buy

CDAGO trades on PancakeSwap V2 against BNB through the pool above. Always confirm the contract address on this page or on the official website and X account before trading - never from an unverified message or comment.

PRODUCT

Dago Blocks: the first game

Dago Blocks is an offline 8x8 block puzzle game in the style of Block Blast, with an original dark navy and blue-to-cyan visual identity based on the CoinDago brand, plus original music and sound effects.

Gameplay

- Endless levels on an 8x8 board
- Timed mode (60 seconds)
- Daily challenges and daily login streak
- Daily spin wheel
- Power-ups and bomb blocks
- Achievements and statistics
- Difficulty levels and block skins, including a skin shop
- Interactive tutorial
- Share your record as an image (PNG)

Product facts

- Plays fully offline - no wallet required
- English language, with sound on / off
- Main menu and game-over links to the official website, X, and Telegram community
- Current build: APK v1.4 (versionCode 5), November 2026
- Play Store version in preparation

> **Important:** Points inside Dago Blocks are called CDAGO as a game score. They are a score inside the game only. They are not the CDAGO token, they cannot be withdrawn, and playing does not pay free cryptocurrency.

Advertising in the Play Store version

The planned Play Store version carries a single, limited advertising format: one interstitial ad, shown on the game-over screen when the player loses. There are no plans for constant or intrusive advertising inside gameplay.

Game income is split 50% to liquidity and 50% to burns

This split was decided by the founder on 9 November 2026 and is the project's published revenue rule. When Dago Blocks and future games generate income, half of that income goes to adding liquidity to the CDAGO pool and half goes to burning CDAGO. Burns are executed on-chain and can be verified on BscScan when they happen. No burn has taken place yet at the date of this document.

Roadmap

Phase	Content
November 2026 - Foundations	Token deployed and verified (done). Liquidity pool live (done). Dago Blocks built and polished. CoinDago logo and token information approved on BscScan. Founder LinkedIn published (done). Telegram and X community building. This whitepaper published.
Play Store launch	New personal developer account process, including Google's closed test with 12 testers for 14 continuous days, then production review. Target: Android 16 (API 36), AAB format. Updates after launch will always be signed with the same signing key.
Ecosystem growth	Additional games of different types, each raising the quality level, all under the CoinDago brand and the same revenue rule.
DagoSwap - later	CoinDago's own swap interface with a single pair: USDT / CDAGO, with swap fees going to the company. Safest planned build: PancakeSwap's audited contracts and pool, with a swap interface on the CoinDago website - no custom swap contract. This step requires USDT and CDAGO pool liquidity, so it comes later.
Liquidity lock - later	Lock pool liquidity (around one year, for example via PinkLock) once the pool has grown enough for the lock to be meaningful.

FOUNDER AND TRANSPARENCY

One named founder, building in public

Founder	
Name	Jorge Manuel Grijalva Garcia
Also known as	Jorsh Garcia / voidcripto
Role	Founder, CoinDago (November 2026 - present)
Location	Ciudad Obregon, Sonora, Mexico
LinkedIn	https://www.linkedin.com/in/jorge-manuel-grijalva-garcia-b9474844a/
Headline	Founder at CoinDago - Building a real gaming company on BNB Chain

The founder works in the agricultural sector in the Yaqui Valley (Productores del Yaqui, Ciudad Obregon) and built CoinDago and Dago Blocks himself, directing the design, token, website, and game. He has been involved in crypto for almost eight years. Publishing his real name and profile is a deliberate transparency choice for a project that asks strangers to trust it.

Risks and disclaimer

CDAGO is an early-stage token with a very thin liquidity pool. Its price is highly volatile and can go to zero. Liquidity is not yet locked. There is no guarantee that games will generate significant revenue, that burns will happen at any particular size or date, or that the Play Store launch will be approved on any particular timeline. Nothing in this document is financial, investment, or legal advice, and nothing in it is a promise of profit or returns. Do your own research, verify the contract on BscScan, and never spend money you cannot afford to lose. CoinDago will never ask for your seed phrase, private key, or password, and will never promise free crypto for playing its games.
